28 Head Cattle Corral

Galvanized steel construction, no coating required. Galvanized steel is the best solution when trying to stop rust occurring.

90 Degree 8ft Wide Sweep, has a self-locking incremental 10ft gate for safe effective cattle positioning, into the alley or chute.

The main holding pen for this system uses our rancher panels and gate.

6ft high x 7ft long, 16-gauge galvanized steel. Fully welded coped center supports between rails. Fully welded top caps and foot plates. Treated welds for rust prevention. Heavy duty joining system that allows for ground changes. Interlocked joining so that panel and gates cannot separate.

10ft wide Bow Gates. Fully welded coped center supports between rails. Treated welds for rust prevention.

4R 28 Head

13 x 7ft Rancher Panels
